Full-stack Software Engineer with extensive startup experience and a proven track record in owning and shipping 0 to 1 applications. Driven by building scalable platforms and shipping AI-native features that solve real user friction.

WORK EXPERIENCE

AI Engineer

July 2026 - Present

Pints.ai

Singapore

- Contributing as the primary engineer behind an agentic low-code platform for citizen developers to build and deploy compliant, production-ready AI applications in hours.
- Optimised the core builder agent orchestration layer, cutting time-to-first-build by 50% and reducing LLM inference costs by 40% while improving generation quality.
- Deployed dedicated sandbox environments for pilot clients, collaborating closely with enterprise users to translate live feedback directly into product roadmap priorities.
- Redesigned the interface around modern agentic workflows, simplifying complex multi-step generation into an intuitive UI for non-technical users.

Research Engineer

Jan 2026 - Apr 2026

NUS School of Computing

Singapore

- Maintained the core backend system for a blockchain-based supply chain lifecycle platform, ensuring end-to-end tracking for pharmaceutical products.
- Optimised CI/CD pipelines to automate cloud deployment workflows, significantly reducing deployment times and improving system reliability.

Software Engineer Intern

Jul 2025 - Dec 2025

Fortifai

Norway

- Contributed to building the core foundation of Fortifai's ESG Compliance platform from an early stage.
- Pioneered AI integration by developing an end-to-end LLM-powered document processing pipeline using Azure services to automate ESG form filling, reducing manual completion time by 90%.
- Refined ESG data models and reporting flows to ensure accurate and actionable sustainability data outputs.
- Supported external audit and certification of the platform's methodology against EU VSME standards.

AI and Software Engineer Intern

Oct 2024 - May 2025

Pints.ai

Singapore

- Primary developer for an LLM-powered insurance claims management and analysis tool to be used by large insurance companies for automated claim processing.
- Worked extensively on application deployment and CI/CD pipeline using AWS, including Docker and Kubernetes.
- Fine-tuned and deployed custom Small Language Models (SLMs) with open-instruct and LoRa for a 30% increase in output quality.
- Enhanced RAG pipeline for improved document querying and retrieval, increasing chunk retrieval quality by 30%.
- Owned an evaluation pipeline to evaluate LLM performance based on the RAGBench framework.
- Built data engineering and processing workflows, including document chunking and preprocessing.
- Developed complex web components and features for an LLM-based research platform.

Full Stack Software Engineer Intern	May 2024 - Aug 2024
Holicay	Vietnam
- Spearheaded an internal data visualisation dashboard to extract actionable business insights, reducing data retrieval time by 90% using aggregate querying. - Built and maintained web application components, driving significant improvements in platform functionality and features to enhance user experience. - Engineered a Retrieval Augmented Generation (RAG) system built on a LangChain architecture for personalised travel itinerary generation.	

Software Engineer Intern	Dec 2023 - May 2024
VisionPal	Singapore
- Developed key features for an integrated eyecare mobile app across both iOS and Android platforms, achieving top 100 ranking in the App Store's Health & Fitness category. - Executed a comprehensive revamp of the application UI, delivering a more intuitive and modern design. - Collaborated closely with cross-functional teams including product manager, optometrists and external developers to translate complex requirements into effective app solutions.	

Research Engineer (Full Stack Development)	Aug 2023 - May 2024
NUS School of Computing Healthcare Informatics	Singapore
- Coordinated the development of a health management and wellness mobile app to enhance user health outcomes. - Managed the development of backend systems to deliver scalable and efficient cloud functions for app performance. - Partnered with the local healthcare industry to develop a mobile app aimed at supporting individuals to quit smoking.	

EDUCATION

Bachelor of Computing in Computer Science (Honours with Distinction)	Aug 2022 – May 2026
National University of Singapore	
- Specialisation in Software Engineering - NUS Overseas Colleges Vietnam (May – Aug 2024) - NUS Overseas Colleges Norway (Jul – Dec 2025)	
GCE A-level	Feb 2018 - Nov 2019
Raffles Institution	

SKILLS

Programming Languages: Typescript, Javascript, Python, Java

Frontend Development: React, React Native, Next.js, Tailwind CSS

Backend Development: Node.js, NestJS, Express, Prisma, Django

Database: PostgreSQL, Firebase, Supabase, MongoDB

AI/ML: OpenAI, LangChain, Open-Instruct (LLMs)

Tools & Technologies: Redis, Docker, Git

Cloud: AWS Certified Solutions Architect

UI/UX Design: Figma
